# NMS-SM-RK3568 v3 ds-ru

Процессорный модуль **NMS-SM-RK3568** выполнен на основе четырехъядерного 64-битного процессора Cortex-A55 RK3568 производства **Rockchip**, который оснащен двухъядерным графическим процессором и высокопроизводительным NPU, поддерживающим до 8 ГБ ОЗУ.

Модуль выполнен в формате стандарта SMARC, обладает хорошей вычислительной мощностью и богатым набором интерфейсов, что позволяет использовать его для энергоэффективных и высокопроизводительных вычислительных систем: он может использоваться на транспорте, в системах защиты информации, в мультимедийных системах, в системах промышленной автоматизации, в автомобильной промышленности, в медицинской технике, в системах передачи данных, банковских терминалах, в приборостроении, также может использоваться в системах интернета вещей на уровне шлюзов и Edge-контроллеров, как часть систем управления и современных расширяемых технологий, как часть мультимедиа устройств для управления аудио- и видеоконтентом и т.д.

**NMS-SM-RK3568** использует передовую 22-нм технологию, основная частота до 2,0 ГГц, что обеспечивает эффективную и стабильную производительность обработки данных, ЦП может быть оснащен памятью объемом до 8 ГБ, шириной до 32 бит и частотой до 1600 МГц, поддерживается режим ECC, что делает данные более безопасными и надежными, а также отвечает требованиям сценариев приложений с большой памятью, в то же время он объединяет двухъядерную архитектуру GPU и высокопроизводительные VPU и NPU. GPU поддерживает OpenGL ES3.2 / 2.0 / 1.1, Vulkan1.1, VPU может обеспечивать декодирование видео 4K 60fps H.265 / H.264 / VP9 и кодирование видео 1080P 100fps H.265 / H.264, NPU поддерживает Caffe / TensorFlow и т.д.

RK3568 имеет MIPI-CSI, MIPI-DSI, HDMI2.0, видеоинтерфейс EDP, может поддерживать до трех экранов с различным выводом на дисплей, а встроенный процессор сигналов изображения ISP 8M может поддерживать двойную камеру и функцию HDR.

Модуль поддерживает конфигурацию двойных гигабитных адаптивных портов Ethernet RJ45, которые могут получать доступ и передавать внутренние и внешние сетевые данные через двойные сетевые порты для повышения эффективности сетевой

передачи.

Платформа **NMS-SM-RK3568** поддерживает Android, операционную систему Ubuntu, система стабильна и надежна, а также обеспечивает безопасную и стабильную системную среду для исследования и производства продукции.

Плата оснащена интерфейсом SMARC, по стандарту (2.0\2.1), который в сочетании с основной платой может формировать полноценную высокопроизводительную материнскую плату для промышленного применения. Он имеет более богатые интерфейсы расширения и может быть напрямую применен к различным интеллектуальным продуктам, ускоряя продвижение продукта.

Модуль создан на доступной несанкционированной компонентной базе и позволяет стабильно и регулярно выпускать промышленные партии изделий.

## Краткое описание возможностей

Основные технические характеристики

|                               |   |
|-------------------------------|---|
| <b>Внешние разъемы</b>        | Краевой разъем в соответствии со <a href="#">SMARC</a> , по стандарту (2.0\2.1)   |
| <b>Процессор</b>              | <a href="#">RK3568</a>  |
|                               | Ядра: 4х-ядерный 64х-битный Cortex-A55, 22нм техпроцесс, частота до 2.0ГГц  |
|                               | Графический ускоритель: ARM G52 2EE, поддержка OpenGL ES 1.1/2.0/3.2, OpenCL 2.0, Vulkan 1.1  |
|                               | Видеоускоритель: аппаратное декодирование 4K 60к/с H.265/H.264/VP9, аппаратное кодирование 1080P 100к/с H.265/H.264, 8M ISP, HDR                            |
|                               | Нейросопроцессор: 0.8Tops@INT8, интегрированный высокопроизводительный AI ускоритель RKNN NPU, поддержка Caffe/TensorFlow/TFLite/ONNX/PyTorch/Keras/Darknet |
| <b>ОЗУ</b>                    | Память LPDDR4 2 ГБайт (512Mbit x 32) ( <a href="#">MT53D512M32D2DS-053WT:D</a> )  |
| <b>Флэш-память</b>            | Память eMMC 16 ГБайт ( <a href="#">THGAMRG7T13BAIL</a> )  |
| <b>ЭСПЗУ</b>                  | 2 Кбита, доступ по I2C, уникальный идентификатор 48 бит ( <a href="#">24AA025</a> )   |
| <b>ИС управления питанием</b> | PMIC ( <a href="#">RK809-5</a> )  |
| <b>Прочие компоненты</b>      | Часы реального времени RTC ( <a href="#">PCF8523TK</a> )  |
|                               | 2х Гигабит ETH PHY ( <a href="#">DAP8211RI</a> )  |
|                               | PCIe Gen 4 Clock Generator ( <a href="#">PI6CG184Q2</a> )   |
|                               | Переключатель SATA → USB3 1:2 ( <a href="#">CBTL02043A</a> )  |
|                               | Аналоговый 4-канальный переключатель SPDT 2:1 ( <a href="#">RS2299XTQC16</a> )  |
| <b>Интерфейсы</b>             | 2х USB 2.0  |
|                               | 1х USB 3.0 OTG  |
|                               | 1х USB 2.0 либо 1х USB 3.0 (USB3_HOST1_SS замультиплексирован с SATA1)  |
|                               | 1х PCIe 2.1   |
|                               | 2х PCIe 3.0   |
|                               | 2х CAN  |
|                               | 3х UART + 1х отладочный UART  |
|                               | 2х SPI  |
|                               | 3х I2C  |
|                               | 1х I2S  |
|                               | 2х PWM  |
|                               | 1х SATA (замультиплексирован с USB3_HOST1_SS)   |
|                               | 1х HDMI   |
|                               | 1х eDP  |
|                               | 1х MIPI DSI or LVDS   |
|                               | 1х SDIO   |
| 2х ETH 1GB                    |   |
| 20х GPIO                      |   |
| <b>Напряжение питания</b>     | +5 Вольт  |

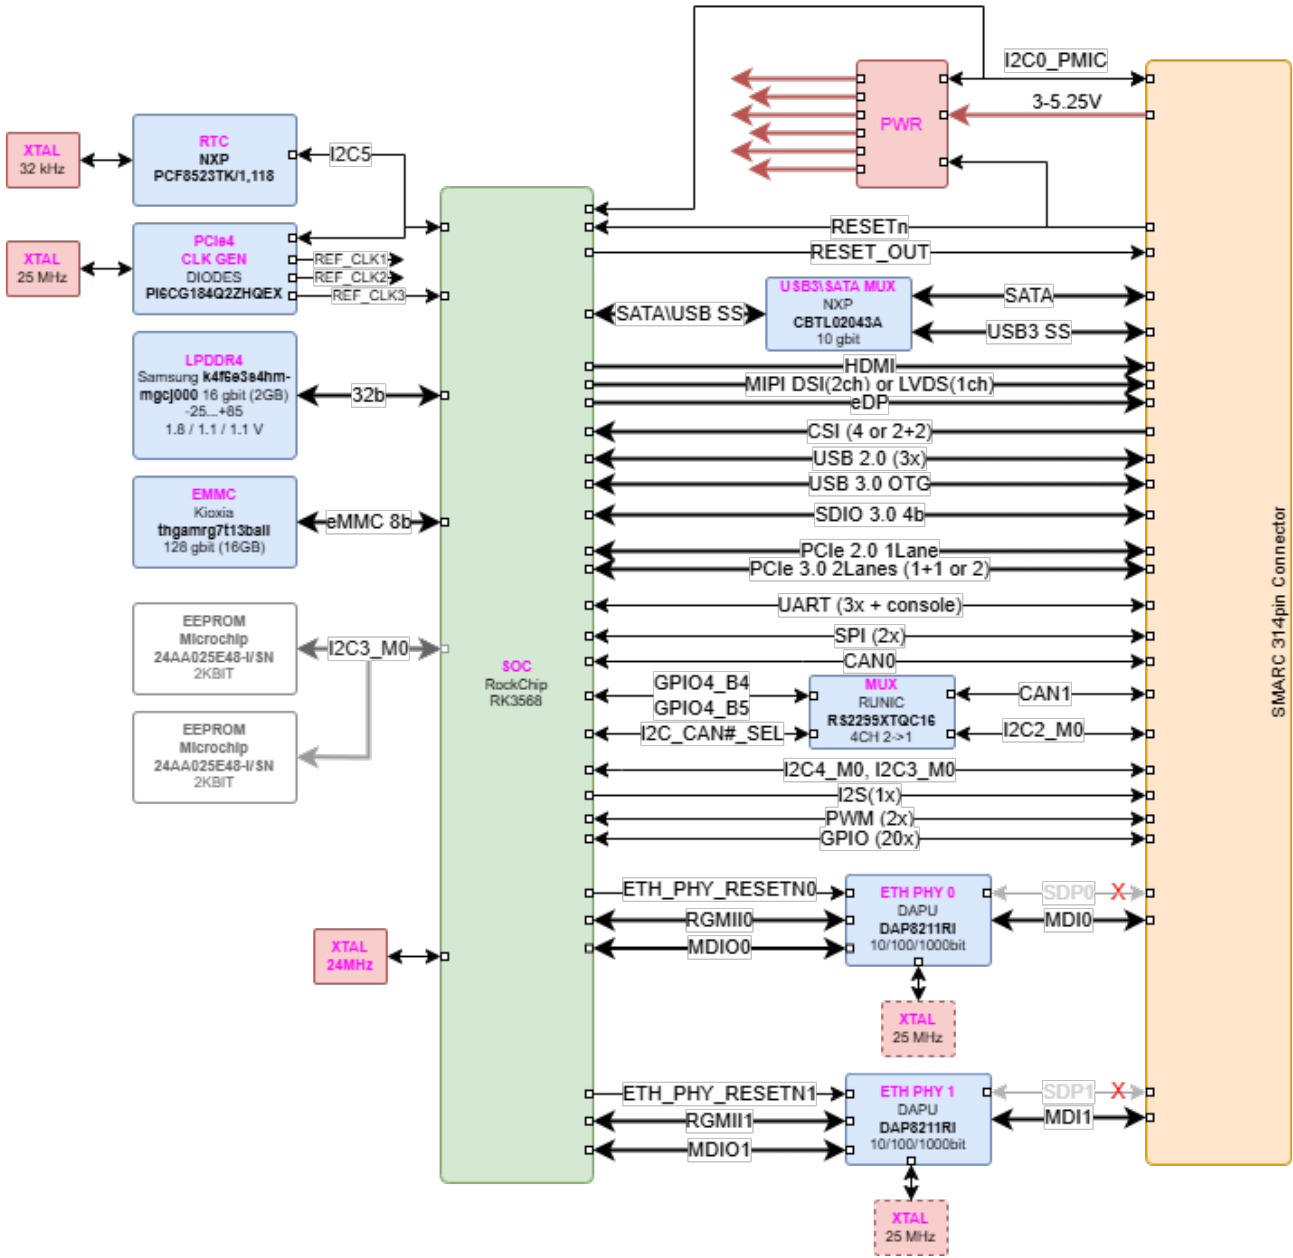

|                           |          |
|---------------------------|----------|
| <b>Потребление</b>        | TBD      |
| <b>Габаритные размеры</b> | 82×50 мм |

Структурная схема модуля

## Механические характеристики

Размер платы : 82 x 50 мм.

Печатная плата состоит из 8 слоев, часть из которых являются заземляющими для подавления помех.

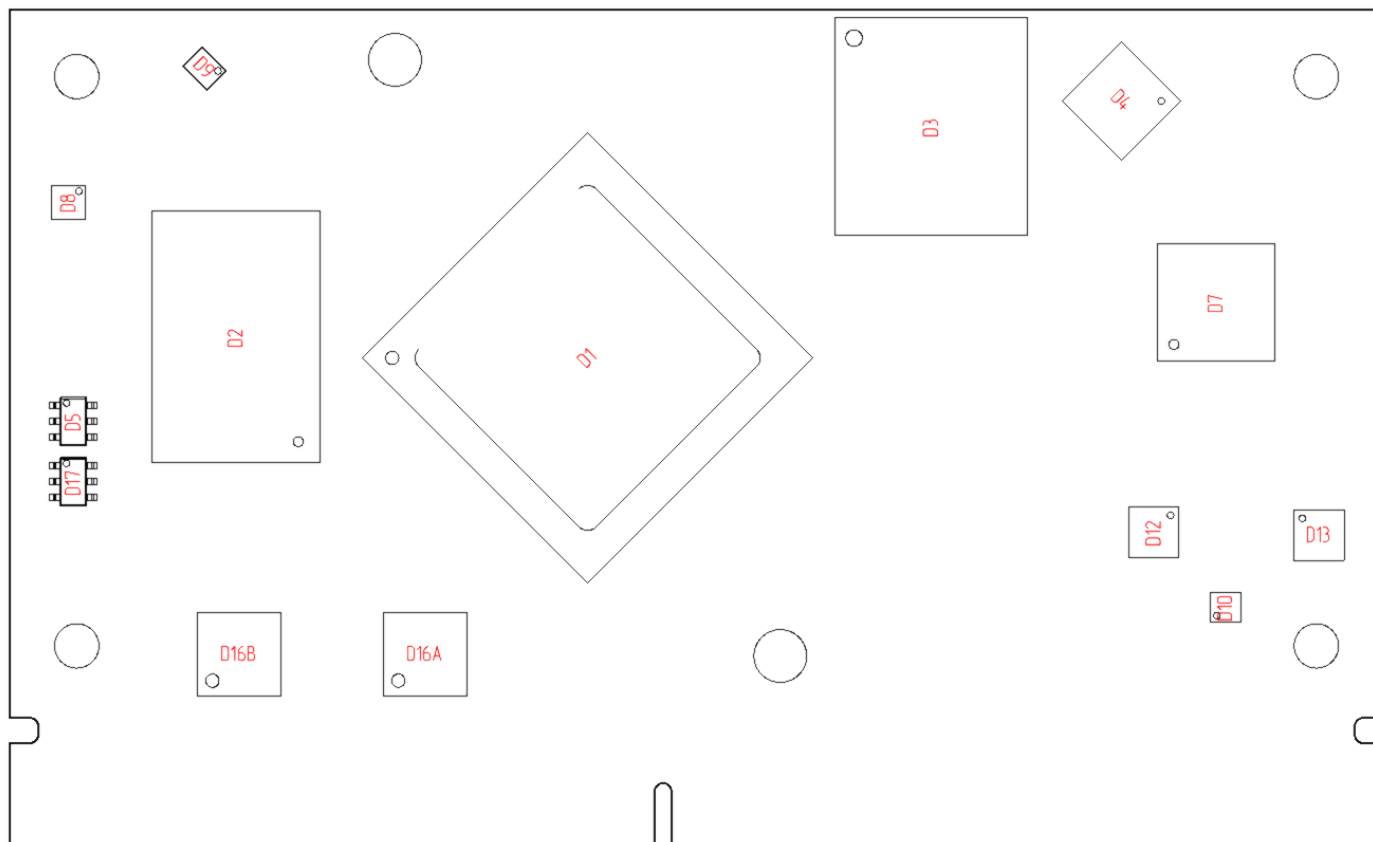

Габаритные размеры

## Основные аппаратные компоненты

## Процессор

На рисунке 5 показаны функциональные модули в процессорной системе RK3568.

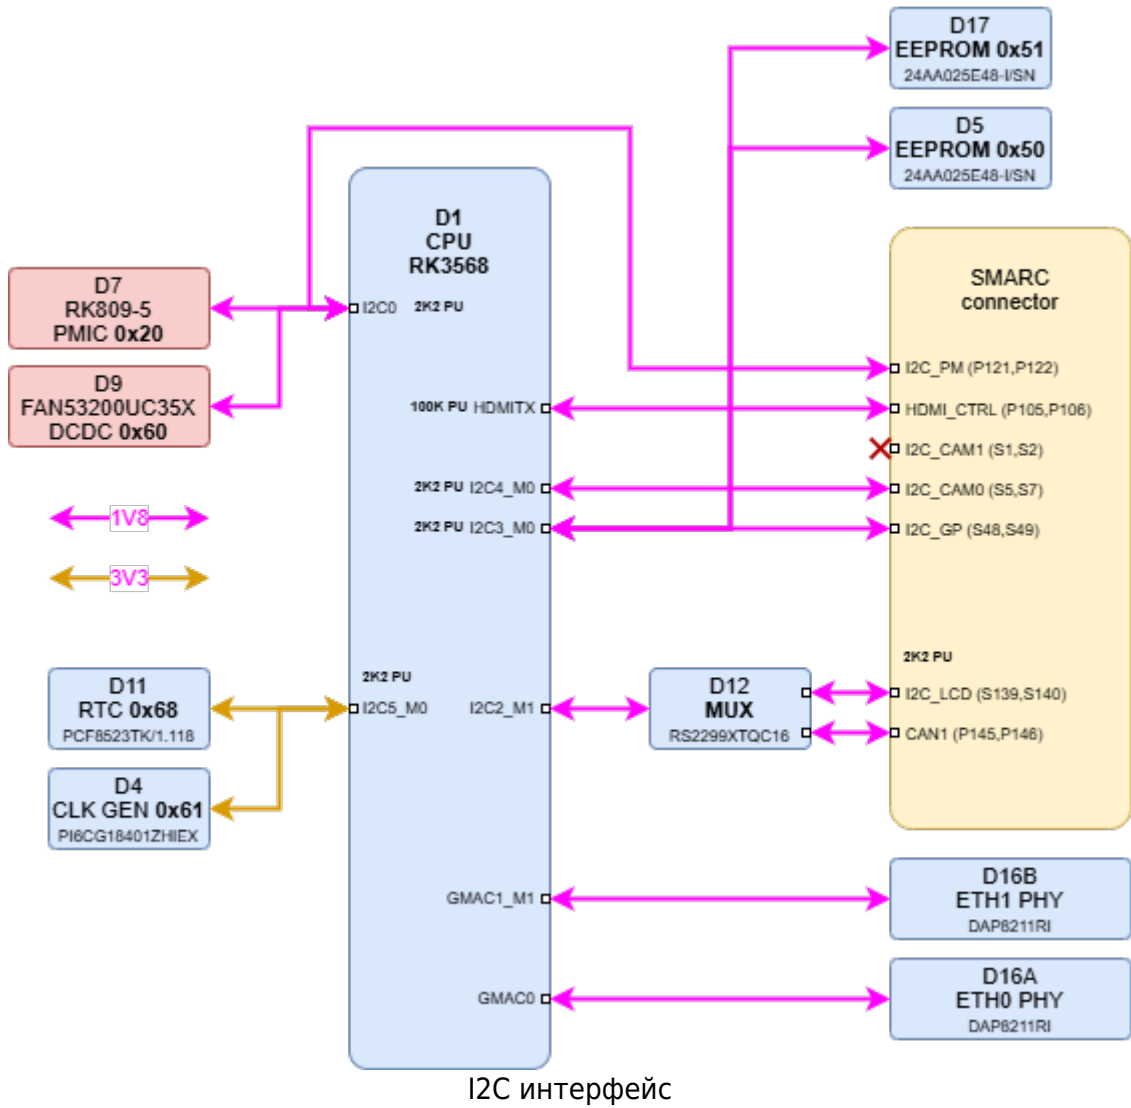

Функциональные модули Rockchip RK3568

## Интерфейсы

### I2C

На плате **NMS-SM-RK3568** доступно три внешних интерфейса I2C и два внутренних для взаимосвязи процессора и периферийных устройств.

Сопоставление адресов I2C0

| Устройство | Адрес      |
|------------|------------|
| PMIC       | 0x00100000 |
| DCDC CONV  | 0x01100000 |

Сопоставление адресов I2C3

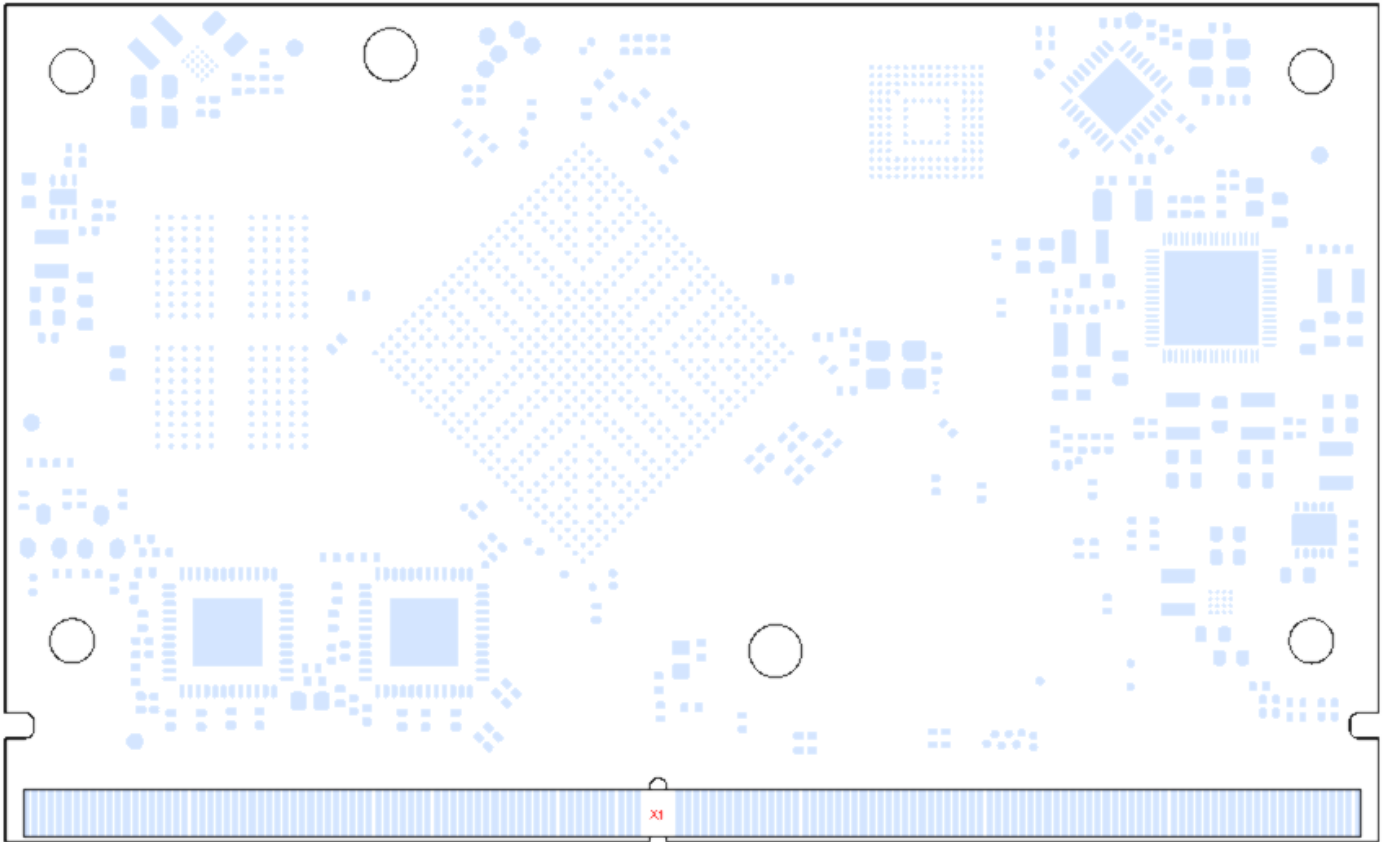

| Устройство     | Адрес      |
|----------------|------------|
| EEPROM 1 (D5)  | 0x01101000 |
| EEPROM 2 (D17) | 0x01100001 |

Сопоставление адресов I2C5

| Устройство | Адрес      |
|------------|------------|
| RTC        | 0x01101000 |
| CLK GEN    | 0x01100001 |

## Настроен выход из SLEEP режима

Изменено питание банка PMUIO2 на VCCA1V8\_PMU

## Установка BRD\_ID "001"

### Реализация I2S Slave режима

через резисторы объединены RX и TX

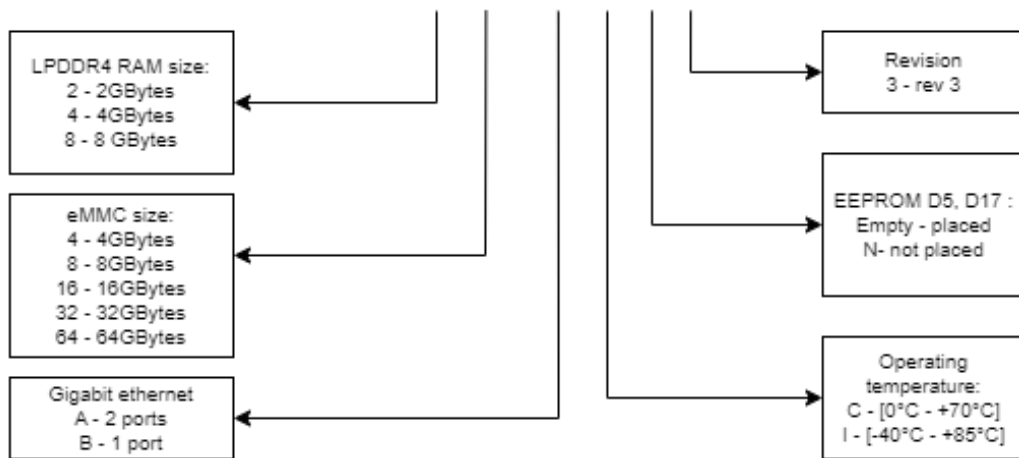

SCLK и LRCK.

| pin D1 | pinname    | netname old     | netname new         |
|--------|------------|-----------------|---------------------|
| C20    | GPIO1_A6_d | PDM_CLK0_M0_SOC | I2S1_LRCK_RX_M0_SOC |
| F18    | GPIO1_A4_d | PDM_CLK1_M0_SOC | I2S1_SCLK_RX_M0_SOC |

### Замена D13 на BD9A400MUV\_

## Ordering information
